12. (Amended) A projector according to claim 1, wherein a center axis of the light incident upon the liquid crystal device coincides with a distinct-vision direction of the liquid crystal device.

13. (Amended) A projector according to claim 1, wherein a viewing angle compensating film which causes a center axis of the light incident upon the liquid crystal device and a distinct-vision direction of the liquid crystal device to coincide is further provided at the light-incident side of the liquid crystal device.

14. (Amended) A projector according to claim 1, wherein a viewing angle compensating film which causes a center axis of light emitted from the liquid crystal device and a distinct-vision direction of the liquid crystal device to coincide is further provided at a light-exiting side of the liquid crystal device.

15. (Amended) A projector according to claim 1, wherein viewing angle compensating films are further provided at the light-incident side and a light-exiting side of the liquid crystal device.

16 (Amended) A projector according to claim 1, wherein a scanning line and a data line crossing and situated above the scanning line on the base substrate are provided at the base substrate, and wherein the drive elements are connected to the data line and the scanning line, and include channel areas and semiconductor layers situated below the scanning line on the substrate.

17. (Amended) A projector according to claim 1, wherein a color light separation optical system which separates the light emitted from the light source into light beams of a plurality of colors is disposed between the light source and the liquid crystal device.

REMARKS

Claims 1-18 are pending in this Application. By this Preliminary Amendment, the specification and claims 6, 9, 11, 12, 13, 14, 15, 16, 17 are amended. No new matter is added.
